

# Tartarus

## Overview & History:

The encryption algorithm called "Tartarus" was created by CacheZero1 in the year 2023.

The project "Cipherus", created by CacheZero1 in the year 2024, was the first project to use this image encryption.

## Process:

The algorithm assigns a number to each letter of the alphabet and uses this number as either a red, green or blue value, to form a new RGB colour.

This RGB colour is used to create a new Image.
